PROFILE

Full Stack Engineer with 4+ years of commercial experience shipping production systems across booking platforms, compliance, health-tech, logistics and government. Currently at **Weeha**, leading full-stack work across **NestJS, Next.js and React Native**. Previously built **data ingestion pipelines and LLM integrations** on AWS and worked directly with enterprise clients. Uses **Claude Code** daily and is building in the **MCP ecosystem**. Full working rights in Australia, open to travel.

TECHNICAL SKILLS

Languages	**TypeScript, JavaScript (ES6+), Python**, HTML5, CSS3
Frontend	**React, Next.js, React Native**, Vue.js, Angular, Three.js, Tailwind CSS
Backend	**Node.js, NestJS**, Express.js, REST APIs, **GraphQL**, WebSockets
AI & Agentic	**Claude API, OpenAI API, MCP**, prompt engineering, tool use, **Claude Code**, Copilot
Databases	MongoDB, SQL, PostgreSQL (exposure), Supabase
Cloud & DevOps	**AWS (Lambda, S3)**, Docker, CI/CD, GitHub Actions, Vercel

EXPERIENCE

Software Engineer Jul 2026 – Present
Weeha | Booking Platform | Sunshine Coast, Australia (Hybrid)

- Led the **V2 server rebuild**, re-architecting the checkout flow across web and mobile by moving pricing and booking computation from the client into a **NestJS** backend. This closed security gaps in the old frontend-driven approach and made checkout faster, more secure and consistent across platforms.
- Designed and shipped a **promotional codes system** end to end, now live in production, letting businesses on the platform run discounts and campaigns.
- Built the **Resources** feature, allowing services to have bookable resources, extending core booking and availability logic across the backend, web (**Next.js**) and mobile (**React Native**).
- Shipped **multiple major features across the full stack** within three months of joining, including a redesigned booking calendar.

Full Stack Engineer (AI & Compliance Platforms) Sep 2025 – Jul 2026
ESGAgent.ai | AI Agents for ESG Compliance | Brisbane, Australia

- Designed the data lake ingestion architecture, choosing an async Lambda pipeline over synchronous processing to handle **50,000+ documents**, with the **Claude API** extracting carbon quantities. Reduced months of manual ESG work to **2-3 hours**.
- Ran **client site visits** and **weekly enterprise demos**, turning operational pain points into shipped features and explaining AI work to non-technical stakeholders.
- Built platform features including solar vendor integrations (**Enphase, iSolarCloud, SolarEdge**) across 10+ assets, AI invoice scanning on **AWS S3**, NARCLIM climate risk analysis and document versioning.
- Implemented authentication and multi-org management with **role-based access control and secure data isolation**.
- Improved API response times by **35%** and reduced initial page load by **40%**.

Full Stack Engineer (Contract) Mar 2025 – Aug 2025
TrueDream.ai | AI Wellness Platform | Remote, Australia

- Shipped MVP to **120 beta users** with **80%+ retention**; over 80% applied for early access to the official launch.

- Built onboarding and an AI daily check-in and chat system using **OpenAI APIs** to generate personalised health insights.
- Built interactive 3D body models rendered in-browser with **Three.js**, on a **GraphQL and Supabase** backend.

Frontend Engineer May 2022 – Jan 2024
RMgX Technologies LLP | *India*

- Built the **BeFIQR flood management system** for the Bihar State Government, a React Native mobile and web platform capturing live water data, generating flood alerts and triggering emergency communications. Showcased at **India Water Week 2024**.
- Led frontend development for **eShipper** (**20,000+ shipments per week**) and **Rivo MSS** (**97% accuracy** through peak season), building batch processing and multi-carrier workflows.
- Built cuLive with real-time chat via **WebSockets**, audio/video calling and Stripe payments.
- Promoted to Associate and mentored 2 interns; recognised with Best Learner and Rising Star of the Year awards.

EDUCATION

Master of Information Technology (Computer Science) | Queensland University of Technology 2024 – 2025
GPA: 6.2 / 7.0 Focus: Software Engineering, Cloud Computing, Security, Web & Mobile Applications

Bachelor of Engineering in Computer Science | Chitkara University 2019 – 2023
CGPA: 9.92 / 10.0

TECHNICAL PROJECTS

ContextBridge | **MCP Server for Multi-Agent Context Sharing**

- Building an open source **MCP server** (**Node.js, TypeScript, Anthropic MCP SDK**) that shares context between Claude Code instances in separate VS Code windows, for split frontend/backend repos.

NoteFlix | **Document to Video Platform**

- Converts PDFs into narrated videos via LLM scripting, built with **Next.js, Node.js and MongoDB** on an **async AWS pipeline** (Lambda, S3) with job tracking and retries. Live at noteflix-app.vercel.app

CisoZen | **AI-Driven Risk Analysis (Client Project)**

- **Python-based LLM pipeline** analysing unstructured compliance data and generating structured cybersecurity risk records.
